Introduction: The Domain of IT Governance

IT Governance refers to managing IT in a way that is fully aligned with strategic targets, such as by removing unnecessary elements or amending project goals to better suit stakeholder priorities. IT Governance & Compliance has become increasingly essential for businesses and their clients in the Digital Age.

Key Stakeholders in IT Governance

Compliance Manager	IT Auditor	IT Manager	Security Architect
Head of IT Governance	Information Security Officer	Data Protection Officer	Data Architect

What are the Business Benefits?

- **Alignment -** IT Governance ensures that IT is fully supporting strategic business goals. It also keeps managers and stakeholders aware of what support IT requires in order to do so

- **Safety -** By following IT Compliance guidelines, businesses ensure they are offering adequate protection for client data. This is not only a key element of value in the Digital Age, but it also helps businesses avoid significant financial and reputational penalties

- **Accountability -** IT Governance and Compliance frameworks clarify key roles and responsibilities. This helps set expectations and facilitates problem-solving when necessary

- **Savings -** Aligning IT with business priorities helps businesses remove inefficient or unnecessary processes, decreasing costs and improving ROIs
